SUMMARY

Backend Developer with 4+ years of experience designing and scaling backend systems using Golang and JavaScript. Skilled in API design, performance optimization, and system architecture, with a strong record of collaborating across engineering, product, and design teams to ship reliable solutions. A fast learner who thrives in dynamic environments and adapts quickly to new tools and technologies.

EXPERIENCE

Backend Developer

PT. Phincon

October 2021 – Present, Jakarta, Indonesia

- **Developed and maintained scalable backend APIs** using Golang and Node.js for multiple Telkomsel platforms (ByU, My Telkomsel, and Indihome).
- **Designed and implemented new API bridging services** to integrate internal Telkomsel systems with external third-party partners.
- **Investigated and resolved critical production issues**, improving backend performance and system reliability.
- **Collaborated with QA, SIT, and UAT teams** to ensure smooth testing, debugging, and deployment processes.
- **Conducted performance testing** including load, stress, and soak tests to validate API stability under high traffic.
- **Deployed and monitored backend services** in pre-production and production environments using GitLab CI/CD and Jenkins.
- **Enhanced system observability and monitoring** using New Relic, Prometheus, and OpenSearch.
- **Refactored and optimized legacy codebases**, improving execution time, memory efficiency, and Redis query performance.
- **Collaborated across teams and systems** (Bridging, CRMBE, Finnet, Tokopedia, Agnos) to ensure seamless API integration and data consistency.
- **Authored technical documentation and API specifications** in Postman Collection, and supported cross-functional teams for production readiness.

Backend Developer

PT Docotel Teknologi Celebes

November 2018 – September 2019, Makassar, Indonesia

- Developed a government web-based attendance system using **PHP Laravel**.
- Built and maintained a company product — a **tender management application** using **Golang**.
- Designed and optimized **MySQL** and **PostgreSQL** databases to support both systems.
- Collaborated with the **QA team** to perform testing and debugging during development cycles.
- Implemented **RESTful APIs** for both internal and government projects.
- Added **authentication and role-based access control** features to improve data security.
- Performed **application debugging, maintenance, and deployment** across development and production environments.
- Supported **server setup and configuration** on Linux environments.

Intern Web Developer

CV Media Sakti

September 2016 – July 2018, Makassar, South Sulawesi, Indonesia

- Completed an internship focused on backend development using Laravel
- Built and maintained backend features for KotakArsip, along with several company profile websites for clients of CV Media Sakti
- Learned to integrate backend services with existing frontend implementations across multiple projects
- Gained hands-on experience deploying applications to production servers

PROJECT

Bridging By.U

PT Phincon • www.byu.id/v2 • February 2025 – Present

- Developed new RESTful APIs using Golang (Fiber framework) to bridge legacy and new systems during migration, ensuring seamless service continuity while the new system was still under development
- Wrote unit and integration tests to ensure API reliability and minimize regression bugs before release
- Conducted performance testing to validate API responsiveness and stability under load
- Supported QA testing cycles, collaborating closely with QA team to identify and resolve issues pre-release
- Managed deployment processes to preprod and production environments
- Participated in a rotating on-call shift schedule with team members to provide production support and ensure quick incident resolution

FMC (MyTelkomsel x Indihome)

PT Phincon • www.telkomsel.com/indihome • November 2023 – January 2025

- Developed new RESTful APIs using Node.js (Express.js) to support the integration of Indihome into the MyTelkomsel app, covering key features such as registration, order tracking, and Indihome package listing
- Diagnosed and resolved API issues to improve system stability and reduce production bugs
- Wrote unit and integration tests using Jest to ensure code quality and reliability
- Supported QA testing in preprod and production environments, working closely with QA team throughout release cycles
- Deployed builds to preprod environment using Jenkins to support QA testing needs
- Led deployment activities during night-shift releases, coordinating with cross-functional teams to ensure smooth rollouts
- Supported System Integration Testing (SIT), User Acceptance Testing (UAT), and Non-Functional Testing (NFT) phases

MyTelkomsel

PT Phincon • www.telkomsel.com/mytelkomsel • October 2021 – October 2023

- Migrated backend services from monolithic to microservices architecture using Node.js (Express.js) and Golang to improve scalability and maintainability
- Developed and maintained RESTful APIs to support MyTelkomsel core features
- Deployed builds to preprod environment using Jenkins, verifying pod readiness on OpenShift (OCP) and AWS
- Diagnosed and resolved API issues to improve system stability and reduce production bugs
- Wrote unit and integration tests to ensure code quality and reliability
- Supported QA testing in preprod and production environments, working closely with QA team throughout release cycles
- Led deployment activities during night-shift releases, coordinating with cross-functional teams to ensure smooth rollouts
- Supported System Integration Testing (SIT), User Acceptance Testing (UAT), and Non-Functional Testing (NFT) phases

Web Profile Wahdah Makassar

Wahdah Islamiyah Makassar (Volunteer Project) • wahdahmakassar.or.id/ • January 2018 – December 2019

- Built a company profile website using Laravel to serve as a central information hub for Wahdah Islamiyah Makassar, an Islamic organization based in Makassar
- Integrated frontend and backend using Laravel, enabling content management for articles, Friday sermon scripts (naskah Jumat), and religious study (kajian) materials
- Delivered the platform as a volunteer contribution to support the organization's digital outreach and information accessibility

eproc

PT Docotel Teknologi Celebes • not active yet • January 2019 – September 2019

- Built APIs using Golang to aggregate and serve tender listings across Indonesia
- Implemented web crawling to collect tender data from multiple sources and consolidate it into a unified database
- Coordinated with frontend, Android, and iOS developers for API integration and issue resolution
- Supported QA team during testing to ensure feature quality before release
- Independently managed deployment to production servers

KotakArsip

CV Media Sakti • not active yet • August 2017 – August 2018

- Completed an internship focused on backend development using Laravel
- Built and maintained backend features for KotakArsip using Laravel
- Learned to integrate backend services with an existing frontend implementation
- Gained hands-on experience deploying applications to a production server

EDUCATION

Bachelor of Computer Science

Minor in Software Engineering • STMIK Handayani Makassar • Makassar, South Sulawesi, Indonesia • 2019 • 3.77

- Completed a final project using PHP Laravel implementing the Floyd–Warshall algorithm.
- Focused on web programming and backend development throughout the study.

High School Diploma

SMK Tridharma MKGR Maros • Maros, South Sulawesi, Indonesia • 2015

- Focused on computer network setup, maintenance, and troubleshooting.
- Completed a final project on local network configuration and server management.
- Recognized for outstanding performance in networking practical exams.

SKILLS

Programming Languages: Go, Javascript

Databases: PostgreSQL, MySQL, MongoDB, Redis

Tools & Frameworks: Docker, Git, Postman, JMeter (Performance Testing), Fiber (Golang framework), Express.js (Node.js framework), Jenkins (CI/CD), Kubernetes, AWS, Rancher

Web Technologies: REST API, JSON, YAML

Architecture & Practices: Microservices Architecture, RESTful API Design, CI/CD, Unit & Integration Testing

Monitoring & Observability: Grafana, Prometheus
